

Network Redesign

Improving Transit Service Together

The Metro Transit Network Redesign will design a route system that will better meet the needs of Madison area residents and businesses by increasing access and frequency, decreasing travel times, and improving the quality of transit riders' experience.

PROJECT TIMELINE

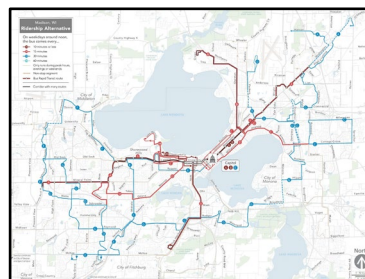

Phase II: Network Alternatives

Input received from the first phase of the project was used to develop two contrasting network alternatives: a coverage network – maximizing the number of people with access to bus service, and a ridership network – maximizing frequency and the number of riders the network will draw.

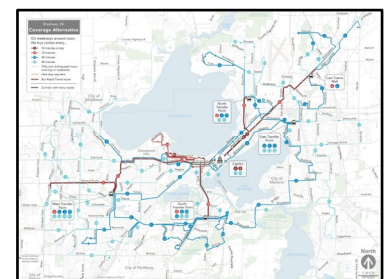

Both alternatives are realistic, but neither is a proposal. They are intended to show the extremes of what might be possible.

We want to know what you think!

Ridership Alternative

Coverage Alternative

We want to know your thoughts about the network alternatives! Please take the community survey!

Your feedback and input on this survey will help guide the development the Draft Network Plan in Winter 2022 and ultimately what type of service will be implemented.
